

INTEGRATED OPERATIONS CENTER

One command center for your network, infrastructure & security.

WinVibe designs, builds, and operates integrated operations centers that unify your data center, network operations, security operations, and command-and-control into a single environment — monitored, secured, and controlled from one place.

OVERVIEW

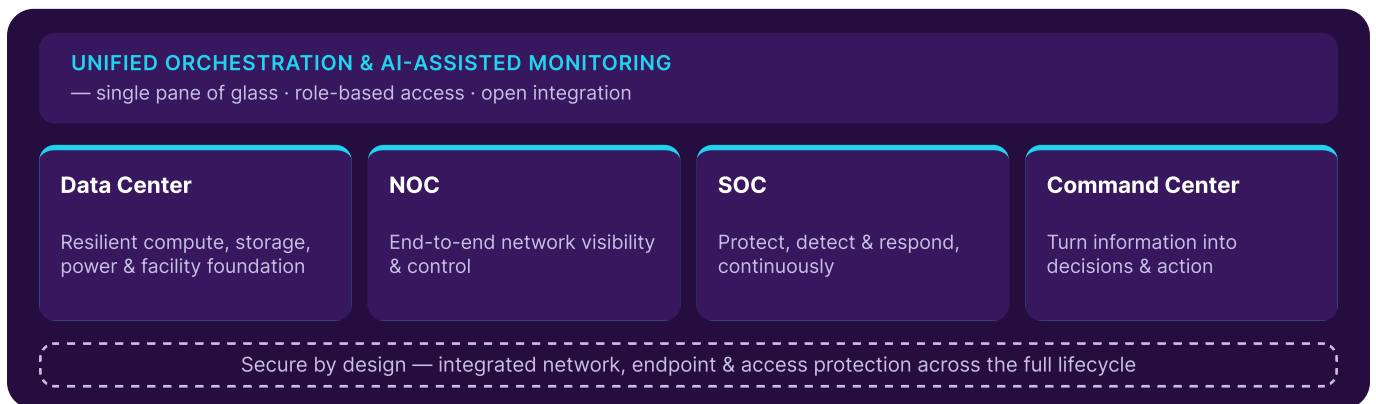

When operations are managed in silos.

Modern organizations run mission-critical operations across distributed networks, sites, and systems. Monitoring, infrastructure, and security are often handled by separate teams, tools, and control rooms — fragmentation that slows response, hides operational risk, and increases cost.

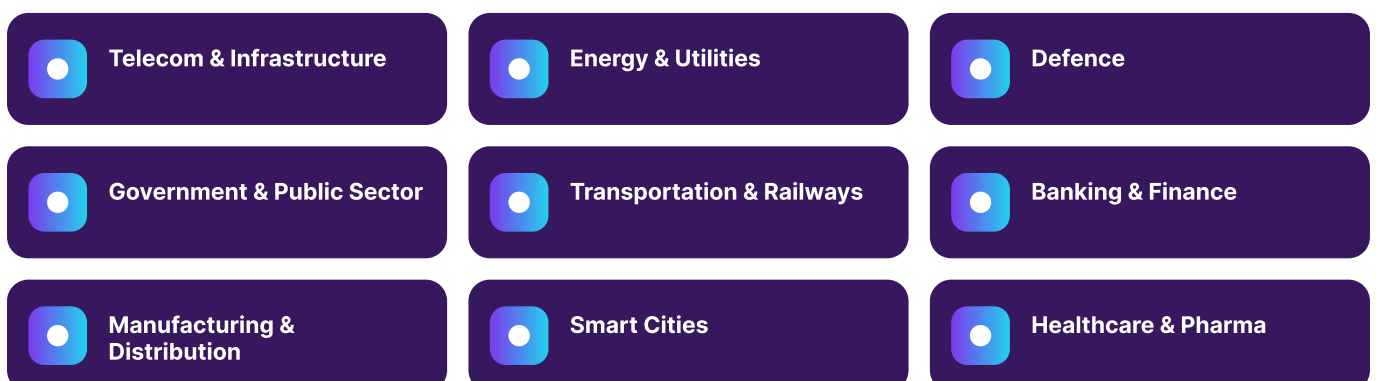

An Integrated Operations Center brings these functions together, combining a resilient data center, network operations, security operations, and a command center into one connected environment. **This is not simply a monitoring room — it is the operational nerve center of the organization**, where visibility, security, and control come together.

SOLUTION ARCHITECTURE

Four operational functions, unified into one environment.

INDUSTRIES WE SERVE

SOLUTION COMPONENTS

Four integrated pillars working as one.

Each function is a full capability in its own right — together they deliver shared visibility, faster response, and stronger control across your operations.

01

Data Center

The resilient foundation for every operation.

- **Compute & storage** — blade/rack servers with primary SAN storage.
- **Network core** — high-throughput core switching & routing.
- **Power & continuity** — online UPS, backup generator, cooling.
- **Data protection** — backup & archival, redundant HA architecture.
- **Physical security** — access control, CCTV, fire detection.

02

Network Operations Center

End-to-end visibility and control of the network.

- **Unified monitoring** — NMS & OSS across multi-vendor networks.
- **Core functions** — fault, performance & configuration in one console.
- **Service assurance** — SLA monitoring and reporting.
- **Support operations** — integrated helpdesk & trouble-ticketing.
- **Asset intelligence** — inventory & remote fiber monitoring.

03

Security Operations Center

Protect, detect, and respond, continuously.

- **Perimeter defense** — next-gen firewalls & network IPS.
- **Threat detection** — continuous monitoring & correlation.
- **Endpoint & identity** — endpoint protection with AAA.
- **Incident response** — contain, investigate & remediate.
- **Governance** — audit trails, policy & compliance reporting.

04

Command Center

Turn information into decisions and action.

- **Situational awareness** — high-resolution live video wall.
- **Unified dashboards** — network, security & infrastructure views.
- **Cross-domain correlation** — understand impact, not just alerts.
- **Incident command** — structured escalation & coordination.
- **Field coordination** — support & dispatch for distributed teams.

WHY WINVIBE

Integrated operations expertise that goes beyond deployment.

Single Integrated Delivery

Civil, power, network, hardware, software, and integration delivered as one accountable scope — not disconnected parts.

Vendor-Neutral Architecture

We integrate leading platforms and technologies, so you build the right environment without unnecessary lock-in.

AI-Enabled Operations

AI-assisted monitoring, intelligent analytics, and centralized orchestration improve visibility and speed resolution.

Enterprise-Grade Security

Security is built into the environment through integrated network, endpoint, and access protection.

24×7 Managed Services

Continuous monitoring, support, and optimization keep operations performing as your business evolves.

Solution Lifecycle Expertise

From planning and design to operations and optimization, one experienced team supports every stage.

Ready to unify your operations?

Whether you are planning a new operations center, consolidating existing control rooms, or modernizing your infrastructure and security, our experts are ready to recommend the right solution.
